

Installation Instructions

Single Post Mounting (large)

Single post mounting signs come with aluminium channels screwed to the back of the sign and some angles and hardware in a separate bag.

Attach bolts and plates to the two angles. Slide them into the end of the channel so that the two flat faces of the angles are facing each other. (Do not tighten).

Screw the angles to your sign post.

Make sure the sign is level and centred on the post. Then tighten the bolts.
