

# Installation Instructions

## Two Post Mounting System

Signs come with pairs of interlocking rails fastened to the back. The “inner rail” is attached to the sign. The outer rail” is attached to the inner rail with two locking screws.

Your sign posts will need crossrails at the same spacing as your backrails.

Step 1: Back off the locking screws (A) at either end far enough to remove the outer rail.

Step 2: Fasten the outer rail (B) to your

frame using appropriate hardware. Make sure the rail is level with the flange up and out.

Step 3: Hang your sign (with rail flange down) onto the frame. Make sure the two rails have interlocked. Fully tighten the locking screws so that your sign cannot be removed.
